

# Poster Abstracts

Abstracts are in **alphabetical** order by the name of the presenting author.

**List of Posters****Akl, Haidar P-1**

*Abnormal IP3R-induced Ca<sup>2+</sup> release correlates with anti-apoptotic signaling in Diffuse large B-cell lymphoma and B-cell chronic lymphocytic leukemia*

**Andera, Ladislav P-2**

*Homoharringtonine and Manumycin A accelerate TRAIL-induced apoptosis of human colorectal cancer cells via a different mechanism.*

**Andersson, Yvonne P-3**

*Synergistic anti-cancer effect of immunotoxins and triphenylmethyl-derivates involves decreased stearyl-CoA desaturase protein levels.*

**Annibaldi, Alessandro P-4**

*Deciphering how a RasGAP-derived peptide sensitizes cancer cell to genotoxins*

**Ausserlechner, Michael P-5**

*FOXO3/FKHRL1 is activated in high-risk neuroblastoma and contributes to chemotherapy-resistance and angiogenesis*

**Ayna, Gizem P-6**

*Clearance of dying autophagic cells induces the inflammasome pathway in primed mouse macrophages*

**Bangert, Annette P-7**

*Sensitization of glioblastoma cells to TRAIL-induced apoptosis by histone deacetylase inhibitors*

**Bauwens, Matthias P-8**

*In vitro and in vivo comparison between two PET tracers for apoptosis: <sup>68</sup>Ga-AnxA5 and <sup>18</sup>F-ML10*

**Benedetti, Rosaria P-9**

*Development of a Laser based Technology to study the epigenetic de-regulation of leukaemia cell death*

**Bertrand, Mathieu JM P-10**

*E3 ubiquitin ligase and de-ubiquitinase, cIAP1 and TRABID, regulate RIP4-dependent NF- $\kappa$ B activation*

**Blenn, Christian P-11**

*Poly(ADP-ribose)glycohydrolase is an upstream regulator of Ca<sup>2+</sup> fluxes in oxidative cell death*

**Bock, Florian P-12**

*Investigating the Role of PIDD in the DNA Damage Response*

**Bonaldo, Paolo P-13**

*Crosstalk between autophagy and apoptosis in collagen VI muscular dystrophies*

**Bozonet, Stephanie P-14**

*Hypothiocyanous acid is a selective inhibitor of caspase activation and apoptosis*

**Breyne, Koen P-15**

*Role of Caspase-7 during early involution of the Escherichia coli- or the Staphylococcus aureus-infected mammary gland*

**Brunner, Thomi P-16**

*Thiazolide-induced apoptosis in colon cancer cells: role of GSTP1, Jun kinase and Bim*

**Bultynck, Geert P-17**

*A C-terminal domain of Bax inhibitor-1 displays Ca<sup>2+</sup>-channel pore properties*

**Buqué, Aitziber P-18**

*Secondary targets of multitarget antifolate in human melanoma cell lines*

**Cardozo, Alessandra K P-19**

*CHOP contributes to cytokine/ER-stress induced beta cell apoptosis via decreased Bcl-2 and Mcl-1 expression*

**Catalan Muñoz, Maria Elena P-20**

*Mitochondrial DNA depletion sensitizes L929 cells to death receptor-mediated cell death*

**Cavallucci, Virve P-21**

*Reelin and sex hormones interactions in the pathological apoptosis during cerebellum development*

**Cerella, Claudia P-22**

*Anti-apoptotic effects of synthetic COX-2 inhibitors*

**Clark, Clay P-23**

*Substitutions in the Dimer Interface of (Pro)caspase-3 Affect Protein Structure and Function*

**Conte, Mariarosaria P-24**

*Role of the silencing of genes that encode for HDAC1 and HDAC2 in the cell line of acute myeloid leukaemia U937*

**Conus, Sébastien P-25**

*Cathepsin D induces proteolysis and activation of caspase-8 during neutrophil apoptosis*

**Corazza, Nadia P-26**

*Role of the Bcl-2 homolog Bim in T cell-mediated liver immunopathology.*

**Cornmark, Louise P-27**

*PKC delta associates with XIAP and Smac in breast cancer cells*

**De Meyer, Inge P-28**

*Inhibition of inositol monophosphatase by lithium chloride induces selective macrophage apoptosis in atherosclerotic plaques*

**de Poot, Stefanie P-29**

*Human and mouse granzyme M display divergent and species-specific substrate specificities*

**De Saint-Hubert, Marijke P-30**

*Apoptosis imaging with 68Ga-labelled AnnexinA5 derivatives for early evaluation of cancer therapy*

**De Stefani, Diego P-31**

*VDAC1 selectively transfers apoptotic Ca<sup>2+</sup> signals to mitochondria*

**Declercq, Wim P-32**

*Caspase-14 is required for filaggrin degradation to natural moisturizing factors in the skin*

**Decuypere, Jean-Paul P-33**

*Regulation of inositol 1,4,5-trisphosphate receptors and ER Ca<sup>2+</sup> stores during nutrient starvation-induced autophagy*

**Dell'aversana, Lara P-34**

*Role of miRNA in leukemogenesis and in epigenetic regulation*

**Diemert, Sebastian P-35**

*Implications of CYLD in neuronal cell death*

**Diez-Fraile, Araceli P-36**

*Calcium-sensing receptor-mediated survival in granulosa cells.*

**Doro, Zoltan P-37**

*Phagocytosis of and cytokine release in response to differently dying cells by murine macrophages*

**Dubrez-Daloz, Laurence P-38**

*cIAP1 is a new activator of E2F-1 transcription factor*

**Duprez, Linde P-39**

*Role of RIP1/RIP3 in TNF-induced necrosis and Lethal Systemic Inflammatory Response Syndrome (SIRS)*

**Eberle, Juergen P-40**

*Sensitization of melanoma cells for death ligand-induced apoptosis by kinase inhibitors correlates with characteristic changes at the level of mitochondria, reactive oxygen species (ROS) and death receptors*

**Ergene, Emel P-41**

*Cytotoxic and apoptotic effects of some boron compounds on the mouse neuroblastoma (NS20Y) cell lines*

**Fares, Fuad P-42**

*Natural Factors Induce Apoptosis in Human Cancer Cells: development of new strategies for prevention and treatment of cancer*

**Fecker, Lothar Friedrich P-43**

*Efficient melanoma cell apoptosis and reduced tumor growth in nude mice in a gene therapy approach with selective replication-competent adenoviral vectors armed with death ligands TRAIL and CD95L*

**Feoktistova, Maria P-44**

*cIAPs negatively regulate TLR3-mediated cell death by limiting RIP-1 recruitment to a TRIF-containing signalling complex*

**Ferraris, Elisabetta Saima P-45**

*The stress response of nucleolar AATF regulates apoptosis in a c-Jun-dependent and JNK-independent manner*

**Fourquet, Simon P-46**

*comprehensive map of cell death and energy metabolism regulation*

**Fuellgrabe, Jens P-47**

*Opposing effects of hMOF and SIRT1 on H4K16 acetylation and the sensitivity to the topoisomerase II inhibitor etoposide*

**Geering, Barbara P-48**

*A novel TNFR1-triggered apoptosis pathway involving p38 MAPK, class IA PI3Ks, and ROS in neutrophils*

**Grieco, Luca P-49**

*Transcriptional regulation is still at work during the execution phase of apoptosis.*

**Gurzeler, Ursina P-50**

*Regulation of FasL and TNF $\alpha$ -induced cell death in murine neutrophils*

**Herrero, Carmen P-51**

*Development of Apaf-1 inhibitors as therapeutic tools to decrease unwanted pathological apoptosis*

**Hong, Jiann R P-52**

*Betanodavirus infection-induced oxidative stress can involve in mitochondria-mediated cell death in fish cells*

**Impens, Francis P-53**

*A quantitative proteomics design for systematic identification of protease cleavage events*

**Irobi-Devolder, Joy P-54**

*Mutant HSPB8 causes motor neuron specific neurite degeneration*

**Jacquemin, Guillaume P-55**

*Sensitization of aggressive B-lymphomas to TRAIL-induced apoptosis by the plant flavonoid quercetin*

**Jelinkova, Iva P-56**

*Platinum(IV) derivate LA-12 increases TRAIL-induced apoptosis by upregulation of DR5 and stimulation of mitochondrial events in colon cancer cells*

**Jennewein, Claudia P-57**

*Identification of a novel pro-apoptotic role of NF- $\kappa$ B in the regulation of death receptor-mediated apoptosis of glioblastoma cells*

**Joeckel, Lars P-58**

*Identifying ER stress induced apoptotic proteases with "click-chemistry" based mass spectrometry*

**Kaczmarek, Agnieszka P-59**

*TLR-2 and -9 are sensors of apoptosis in a mouse model of doxorubicin-induced acute inflammation*

**Kaminsky, Vitaliy P-60**

*Inhibition of autophagy sensitizes cells to drug-mediated caspase-dependent and -independent apoptosis via increasing of ROS*

**Kavanagh, Edel P-61**

*p57KIP2 enhancement of staurosporine-induced apoptosis requires LIMK1-mediated actin stabilisation*

**Khalphin, Boris P-62**

*Protective effect of elastase inhibitors against necrotic cell death*

**Kim, Do-Sung P-63**

*Sulforaphane inhibits doxorubicin cardiotoxicity through mitochondrial stabilization and inhibition of NF- $\kappa$ B*

**Kis, Viktor P-64**

*Loss of CG6783, a novel lipid-carrier protein, disrupts autophagy and endocytosis in *Drosophila**

**Kiss, Beata P-65**

*Retinoids induce apoptosis in mouse thymocytes via inducing Nur77 expression*

**Koci, Lenka P-66**

*Changes of cytokinetic parameters and adhesive properties in colon cancer cell populations with different sensitivity/resistance to TRAIL*

**Kovalenko, Elena P-67**

*Use of a panel of anti-HSP70 monoclonal antibodies for detection of HSP70 translocated to cell surface during lymphocyte apoptosis*

**Kovar, Jan P-68**

*Inhibitory effect of unsaturated fatty acids on cell death induced by saturated fatty acids in human pancreatic beta-cells*

**Kramer, Daniela P-69**

*Molecular mechanisms of apoptosis induction by the p53 tumour suppressor family*

**Krautwald, Stefan P-70**

*TAT-crmA blocks both apoptosis and necroptosis*

**Kulesza, Dorota P-71**

*Effects of STAT3 silencing on fate of melanoma and lung cancer cells.*

- Lavrik, Inna P-72**  
*Towards understanding of life and death regulation at CD95/Fas*
- Lepore, Ilaria P-73**  
*Characterization of BARD1 expression and function in leukaemia*
- Liesche, Clarissa P-74**  
*Oligomerization and activity of soluble CD95L*
- Limami, Youness P-75**  
*COX-2 overexpression confers resistance to ursolic acid-induced apoptosis in human HT-29 colorectal cancer cells*
- Linkermann, Andreas P-76**  
*Fas Ligand Mediates Fratricide of Tubular Cells in vivo*
- López, Marcos P-77**  
*XIAP interaction with FAF1 prevents apoptotic effects in TNF $\alpha$  and FASL mediated pathways*
- MacKenzie, Sarah P-78**  
*An Allosteric Network of Interactions in Caspase-3 Provides a Novel Strategy for Inhibitor Design*
- Maes, Hannelore P-79**  
*The Role of Hypoxia-induced Macroautophagy in Melanomagenesis*
- Marivin, Arthur P-80**  
*Interaction between cIAP1 and RhoGTPases*
- Martin, Dale P-81**  
*Tandem Reporter Assay for Myristoylated Proteins Post-translationally (TRAMPP) identifies caspase-cleaved Huntingtin as a novel substrate.*
- Martín Pérez, Rosa P-82**  
*FLIP down-regulation and CHOP-independent up-regulation of TRAIL-R2 induced by ER stress are key events in the sensitization of tumor cells to TRAIL*
- Masoumi, Katarzyna P-83**  
*Identification of a novel protein kinase C delta – SMAC complex that is dissociated during apoptosis*
- Mateva, Rada P-84**  
*The influence of Vitamin C and Tempol on cytotoxic and apoptogenic action of myosmine*
- Melzer, Inga Maria P-85**  
*Functional analysis of the antiapoptotic oncoprotein Aven*
- Meshkini, Azadeh P-86**  
*Intracellular GTP level determines cell fate by differentiation and apoptosis*
- Mizuguchi, Junichiro P-87**  
*Requirement for Arginine Methylation in FOXO3a-mediated G1 Arrest of WEHI-231 B Lymphoma Cells upon Engagement of B Cell Receptor for Antigen*
- Momoi, Takashi P-88**  
*Characterization of Active Caspase-14 From Human Epidermis and Development of the Cleavage*
- Monaco, Giovanni P-89**  
*BH4 domains of Bcl-2 and Bcl-XL differentially regulate apoptosis by modulating inositol 1,4,5-trisphosphate receptors activity.*
- Moquin, David P-90**  
*Regulation of Programmed Necrosis by Cylindromatosis (CYLD)*

**Morbidoni, Valeria P-91**

*Role of apoptosis in the pathogenesis of collagen VI myopathies: studies with primary muscle cultures from Ullrich Congenital Muscular Dystrophy patients and Col6a1 null mice*

**Moret Tatay, Ines P-92**

*Crohn's disease blood T-cells are resistant to Fas-apoptosis independently of bax/bcl-2 ratio*

**Morizot, Alexandre P-93**

*Enhanced caspase-8 activation within the DISC primes over the mitochondrial pathway to sensitize DcR2 expressing cells to TRAIL induced cell death after chemotherapy.*

**Moserova, Irena P-94**

*Photokilling of cancer cells by ethylene glycol porphyrin derivatives involves endoplasmic reticulum stress response*

**Naumann, Ivonne P-95**

*Bortezomib primes neuroblastoma cells for death receptor-induced apoptosis by activation of the mitochondria*

**Nys, Kris P-96**

*UVB-induced Noxa-dependent sunburn cell formation requires p38MAPK/HIF-1*

**Obexer, Petra P-97**

*Activation of the transcription factor FOXO3/FKHRL1 by doxorubicin and etoposide induces reactive oxygen species production and programmed cell death in neuroblastoma cells*

**Ollinger, Karin P-98**

*Attenuation of the lysosomal death pathway by lysosomal cholesterol accumulation*

**Orzaez, Mar P-99**

*Inhibition of cyclin A /CDK2 protein/protein interaction: Re-sensitizing tumor cell lines resistant to Tarceva (erlotinib).*

**Pardo, Julian P-100**

*Multiple pathways of granzyme B-induced cell death: result of evolutionary pressure from pathogens (tumors) to evade cytotoxic cells.*

**Perinpanayagam, Maneka P-101**

*The regulation of co- and post-translational myristoylation of proteins during apoptosis: roles of N-myristoyltransferases and caspases*

**Quax, Wim P-102**

*Designed receptor DR5-specific rhTRAIL variants accelerate induction of apoptosis in cancer cells*

**Raulf, Nina P-103**

*Proteomic approaches to identify novel binding partners of the survival factor Bcl-xL*

**Reis, Carlos P-104**

*Rapid and efficient cancer cell killing mediated by high affinity death receptor selective TRAIL variants*

**Remijsen, Quinten P-105**

*Neutrophil extracellular trap cell death requires both autophagy and superoxide generation*

**Repnik, Urska P-106**

*LeuLeuOMe-induced apoptosis is associated with early autophagosome accumulation and critically depends on cytosolic cathepsin activity*

**Rezvani, Hamid reza P-107**

*XPC silencing in normal human keratinocytes increases reactive oxygen species and triggers metabolic alterations that drive the formation of squamous cell carcinomas*

**Rooswinkel, Rogier P-108**

*Finding the prerequisites for synergy between ABT-737 and conventional therapy in T-cell malignancies*

**Rupprecht, Sina P-109**

*Targeting of XIAP combined with systemic Mesenchymal Stem Cell-mediated delivery of sTRAIL inhibits metastatic growth of pancreatic carcinoma cells*

**Salim, Hogir P-110**

*MicroRNA profiling in small and non-small cell lung carcinomas with different response to radio- and chemotherapy*

**Sánchez, Diego P-111**

*In vitro-expanded and ex vivo-derived human NK cells as a tool to study cell death induced by cytotoxic cells on hematologic neoplasias*

**Sapozhnikov, Alexander P-112**

*Use of 10-N-nonyl acridine orange for flow cytometric analysis of apoptosis*

**Schroeder, Thilo P-113**

*Specific targeting of human Caspases with DARPin binders*

**Schutters, Kristof P-114**

*Annexin A5 based strategy to improve phagocytosis of apoptotic cells*

**Seervi, Mahendra P-115**

*Real Time Analysis of Mitochondrial Events and Caspase Activation by Procaspase Activator : An Essential Role of Mitochondria for Effective Cell Death*

**Sepe, Sara P-116**

*Transglutaminase type 2 and autophagy: its involvement in pexophagy*

**Severin, Fedor P-117**

*Two mechanisms of antioxidant activity of SkQs*

**Sgorbissa, Andrea P-118**

*USP18 modulates the responsiveness to Interferon- $\alpha$  (IFN- $\alpha$ ) induced apoptosis in glioblastoma cells: identification of the critical players.*

**Shirley, Sarah P-119**

*Divergences in the TRAIL signaling pathway – differences between mice and men.*

**Silva, Carolina P-120**

*Serine protease inhibitor-2 blocks inflammatory and cell cytotoxicity responses in mousepox infection*

**Simovart, Helle-Evi P-121**

*Apoptosis during luteolysis and its associations with the expressions of Bax and NF- $\kappa$ B in pseudopregnant rats*

**Sobolewski, Cyril P-122**

*Determinants of the inhibitory effects of COX-2 inhibitors on cell proliferation in hematopoietic malignancies*

**Soeur, Jeremie P-123**

*Selective cytotoxicity of epidermoid cancer cells through apoptosis induction by RW002 essential oil*

**Sokolov, Sviatoslav P-124**

*Role of mitochondria in cell senescence-induced death of yeast *Saccharomyces cerevisiae**

**Spes, Ales P-125**

*Lysosomes and lysosomal proteases are only amplifiers of apoptosis in death receptor pathway*

**Steinebrunner, Niels P-126**

*Interaction of Hepatitis B virus (HBV) with apoptosis signaling pathways is involved in viral clearance*

**Storm, Petter P-127**

*Why does HAMLET preferentially kill tumour cells? p38- and Ras-dependent death in carcinoma but upregulation of innate immunity in healthy, differentiated cells*

**Szondy, Zsuzsanna Julianna P-128**

*Retinoids enhance glucocorticoid-induced apoptosis of T cells by facilitating glucocorticoid receptor-mediated transcription*

**Tan, Kevin P-129**

*Novel Insights into Cell Death of Malaria Parasites: Opportunities for Therapeutic Exploit*

**Tassi, Elena P-130**

*Rescuing melanoma susceptibility to apoptosis by inhibiting IAPs expression*

**Trivaii, Ioanna P-131**

*Differentiation-Dependent Apoptosis (DDA) accompanies induced erythroid differentiation of Murine Erythroleukemia (MEL) cells*

**Trulsson, Maria P-132**

*HAMLET binding to  $\alpha$ -actinin disrupts focal adhesions and facilitates tumor cell detachment*

**van de Kooij, Bert P-133**

*Unconventional ubiquitination regulates Bid apoptotic activity*

**van Domselaar, Robert P-134**

*Heterogenous nuclear ribonucleoprotein K is a pan-granzyme substrate and is essential for cell survival*

**Vanden Berghe, Tom P-135**

*Susceptibility for *E. coli* LPS-induced lethality is differentially regulated by caspase-1 and -3*

**Varecha, Miroslav P-136**

*Alteration in mitochondrial superoxide production by shRNA gene silencing of AIF in various cell lines*

**Verbeke, Stephanie P-137**

*Signaling of p75 neurotrophin receptor in breast cancer cells*

**Verfaillie, Tom P-138**

*PERK deficiency distorts the ER – mitochondrial interface and protects against ROS-induced intrinsic apoptosis*

**Verschooten, Lien P-139**

*Induction of autophagy and caspase dependent cell death by the flavonoid Luteolin specifically in malignant skin cells.*

**Viola, Giampietro P-140**

*MG-2477, a new tubulin inhibitor with potent antitumor activity in vitro and in vivo induce autophagy and delayed apoptosis in A549 cells*

**Vissers, Margreet P-141**

*The Regulation of HIF-1 by Vitamin C and its Impact on Cell Survival in Inflammation and Cancer*

**Vurusaner, Beyza P-142**

*Apoptosis induced by lipid peroxidation end products: cellular and molecular basis*

**Wahl, Kristin P-143**

*Serum biomarkers of cell death for monitoring therapy response of gastrointestinal carcinomas*

**Wejda, Magdalena P-144**

*Proteome-wide analysis reveals that caspase-2 shares the cleavage and substrate specificity with caspase-3*

**Widmann, Christian P-145**

*Improving the survival of pancreatic beta cells*

**Witte, Ines P-146**

*The role of PON3 in reduction of oxidative stress and cell death*

**Wu, Jen-Leih P-147**

*Stage-specific expression of TNF $\alpha$  to regulate sequential apoptotic and necrotic cell death in birnavirus-infected fish cells*

**Yazdanparast, Razieh P-148**

*Intracellular GTP level determines cell fate by differentiation and apoptosis*

**Zarzynska, Joanna P-149**

*TGF- $\beta$ 1 regulates apoptosis and autophagy in bovine mammary epithelial cells during involution*

**Zecchini, Erika P-150**

*Beyond cell death: role of p66shc and redox stress on autophagy, adipogenic differentiation and metabolism.*

**Zhivotovsky, Boris P-151**

*Decitabine synergistically with valproic acid restores caspase-8 expression and sensitizes small cell lung carcinoma cells to TRAIL*
